The science behind Constant Therapy

FEATURED RESEARCH
Detecting small & large fluctuations in language and cognitive performance: A longitudinal rehabilitation case study
Kiran, S.

HIGHLIGHTS
This case study shows how it was possible to detect the onset of a recurrent stroke due to changes in language and cognitive performance from Constant Therapy’s accuracy and latency reports even before a confirmatory diagnosis was made.

FIGURE 1
Patient performance between 4/20/13 and 4/30/13, in four task categories. As can be seen, performance declined significantly between 4/27 & 4/30.
